PRODUCT MARKETING SUMMIT SYDNEY 2026

Build the brain behind your *product marketing.*

The folder your AI tools read before they do any work.

Will Mulholland, Intelligent Growth

QUICK CHECK

How much of your AI work is copy, paste, explain, *repeat?*

Hands up for any that are you.

1. My product context is in my head or my AI tool's memory, and it keeps forgetting
2. I paste the same docs into every new chat
3. I set up a Claude Project or Custom GPT, and I still rewrite the draft
4. My AI tool already knows my product, my customers and my competitors, and I just edit its drafts

15 SECONDS ON ME

I build marketing systems that ship as fast as the *product* does.

$180M

launched at eBay Ads

four new ad products, zero to $180M in two years

2k→55k

users in two months

Prompt Cowboy, run on this exact system

2,800+

marketers trained

PMA, Generate Summit, Spark Festival, Canva, Salesforce

Intelligent Growth is the system I built so marketing keeps pace with the fastest product teams without dropping quality.

BUILT WITH

ebay Ogilvy KFC BLINQ beehiiv Intelligent Growth

SPOKEN AT

Product Marketing Alliance GENERATE Canva

Product ships every week. Marketing covers a *fraction.*

Big features go live and customers never hear. The sales demo becomes the most accurate place to learn the product, because the website and the messaging are already behind.

- Every change flows through positioning, messaging, enablement, the site and content.
- From a blank page, product marketing is the bottleneck.
- From a brain that stays current, launches and rolling content keep up.

WHAT A MARKETING BRAIN IS

A folder your AI tool reads before the work *starts.*

It is a set of text files on your computer: what you sell, who you serve, what your customers say, and how you want the work done.

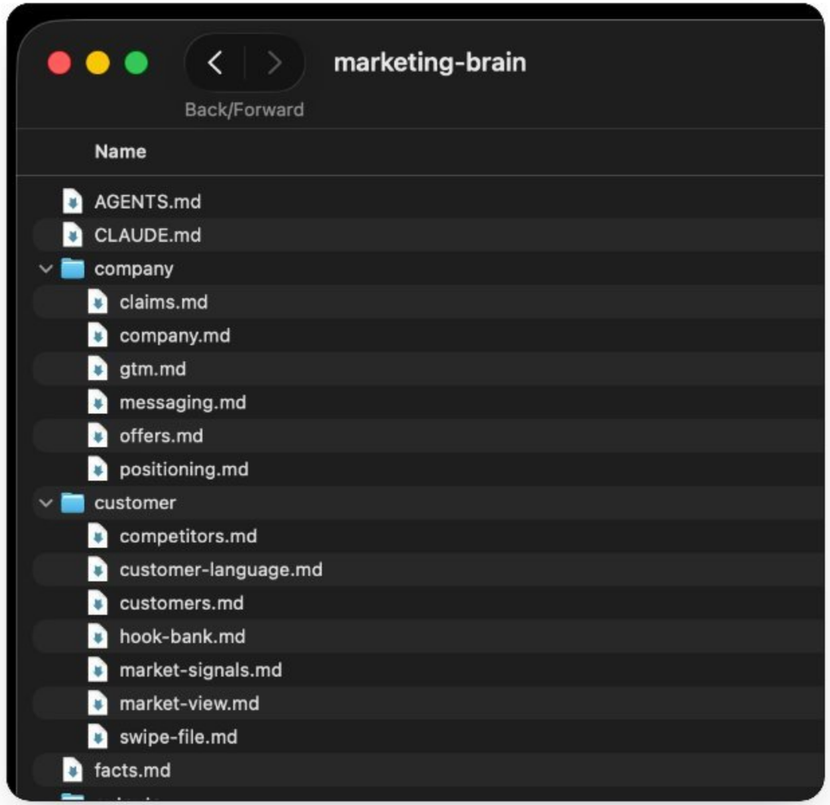

- Brief it like a new hire: the product, the buyer, the proof and what good looks like.
- If you can write a doc and drop it in a folder, you can build one.
- It replaces the prompt library and the dozen docs you dig up and paste in every time.

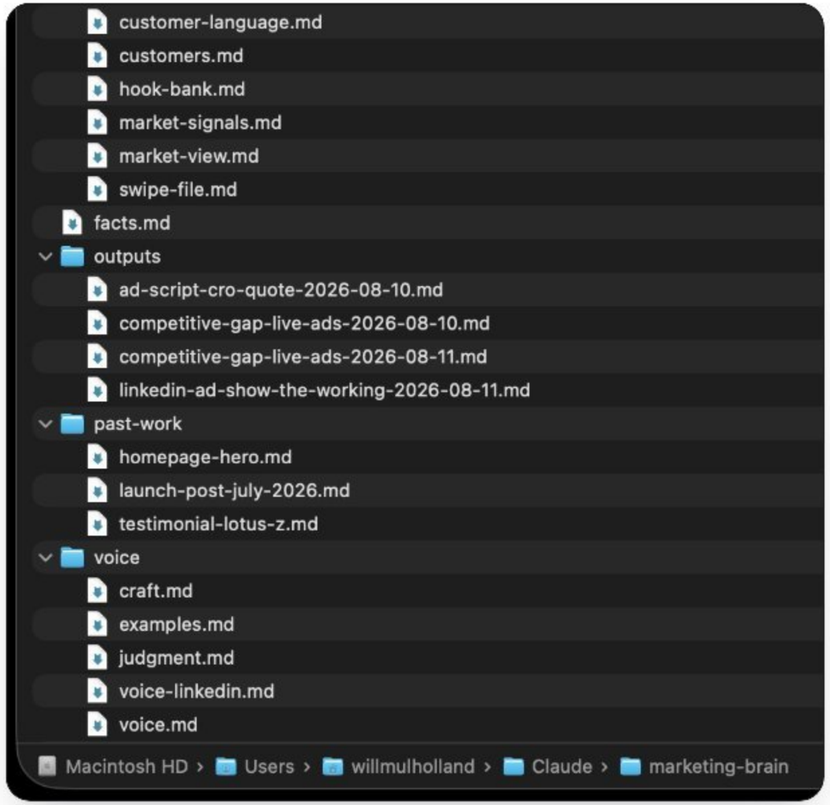

```
marketing-brain/
├─ CLAUDE.md    the map
├─ company/     what you sell and can prove
├─ customers/   who you serve and what they say
├─ people/      stakeholders and decisions
├─ projects/    active work and next actions
├─ meetings/    source-backed notes
└─ systems/     how you want the work done
```

A REAL MARKETING BRAIN

What it *looks like.*

A real folder on my computer, built from ordinary text files.

THE STRUCTURE

Two sides and a *prefrontal cortex.*

MARKET SIDE · MARKET CONTEXT

What's happening outside

Calls, reviews, objections, the words customers use, and what your competitors are claiming.

COMPANY SIDE · COMPANY CONTEXT

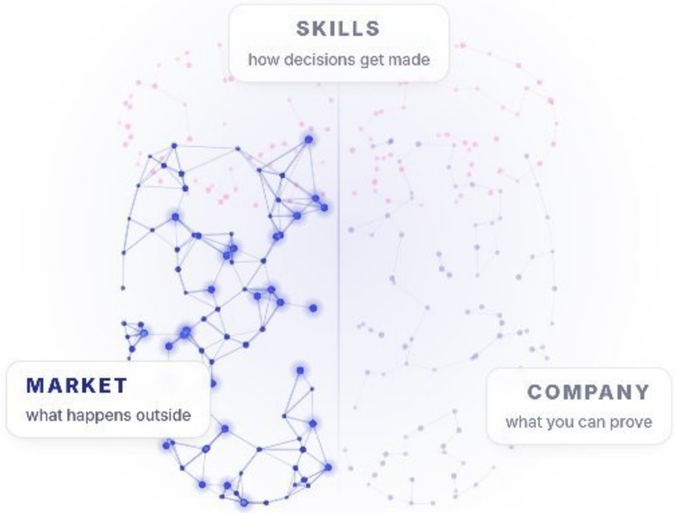

What you can say

Offer, proof, positioning, numbers you can quote, and the claims you trust.

PREFRONTAL CORTEX · YOUR SKILLS

How you want the work done

Skills capture your processes and judgment, then show your AI tools how you want each task done.

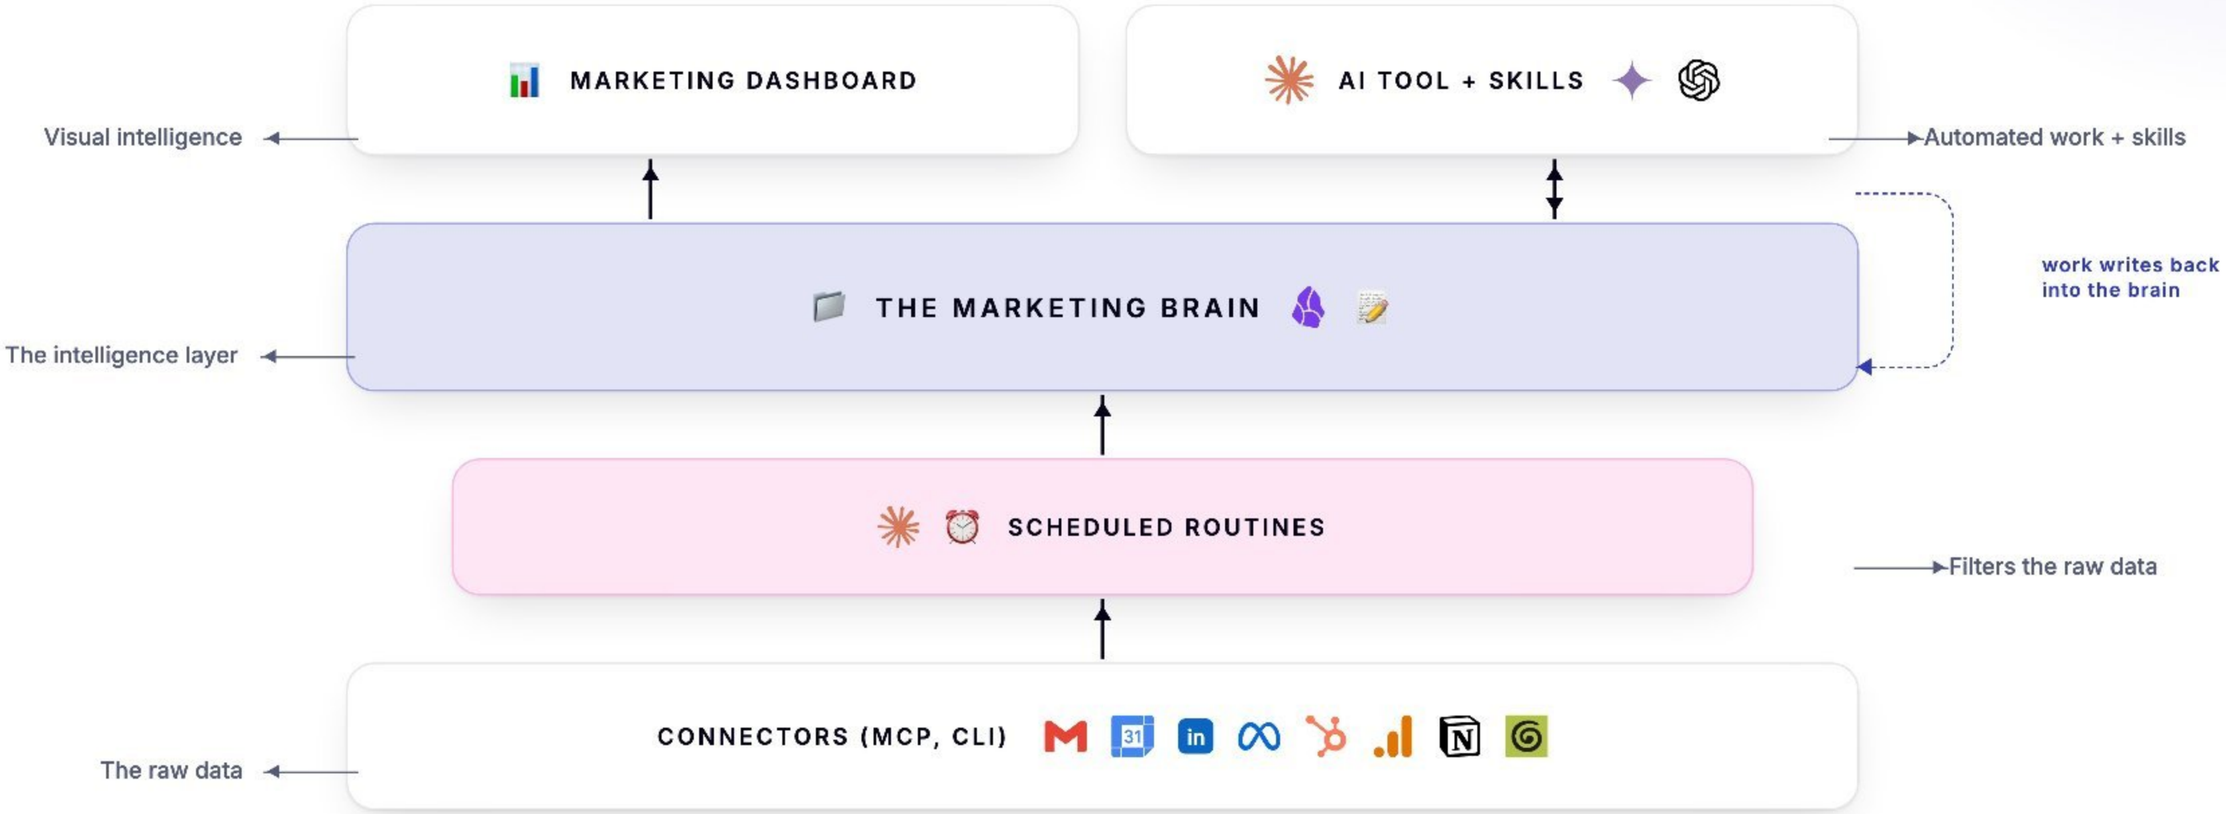

THE MARKETING BRAIN, FROM ABOVE

Most setups have the two sides and no prefrontal cortex. All knowledge, no judgment.

INTELLIGENT GROWTH

How it all works *together.*

INTELLIGENTGROWTH.APP · BUILD THE BRAIN BEHIND YOUR MARKETING

SKILLS

A skill is a folder that teaches the *method.*

Plain-English instructions for one task, plus the templates it needs. Your AI tool pulls it in when the task calls for it.

Mine include positioning, messaging houses, launch plans, competitive teardowns, sales enablement and a de-slop review that catches AI-sounding copy before it ships.

`skills/messaging-house/SKILL.md`

- Use when: a product or feature needs its messaging house.
- Steps: buyer, alternatives, value pillars, proof for each pillar, then the template.
- Quality bar: every claim traced to facts.md. No invented numbers.

Same prompt. One chat knows your business. One has never *met you.*

EMPTY CHAT

Write a LinkedIn post about our launch

Excited to announce our new feature. We are thrilled to share this journey with our amazing community.

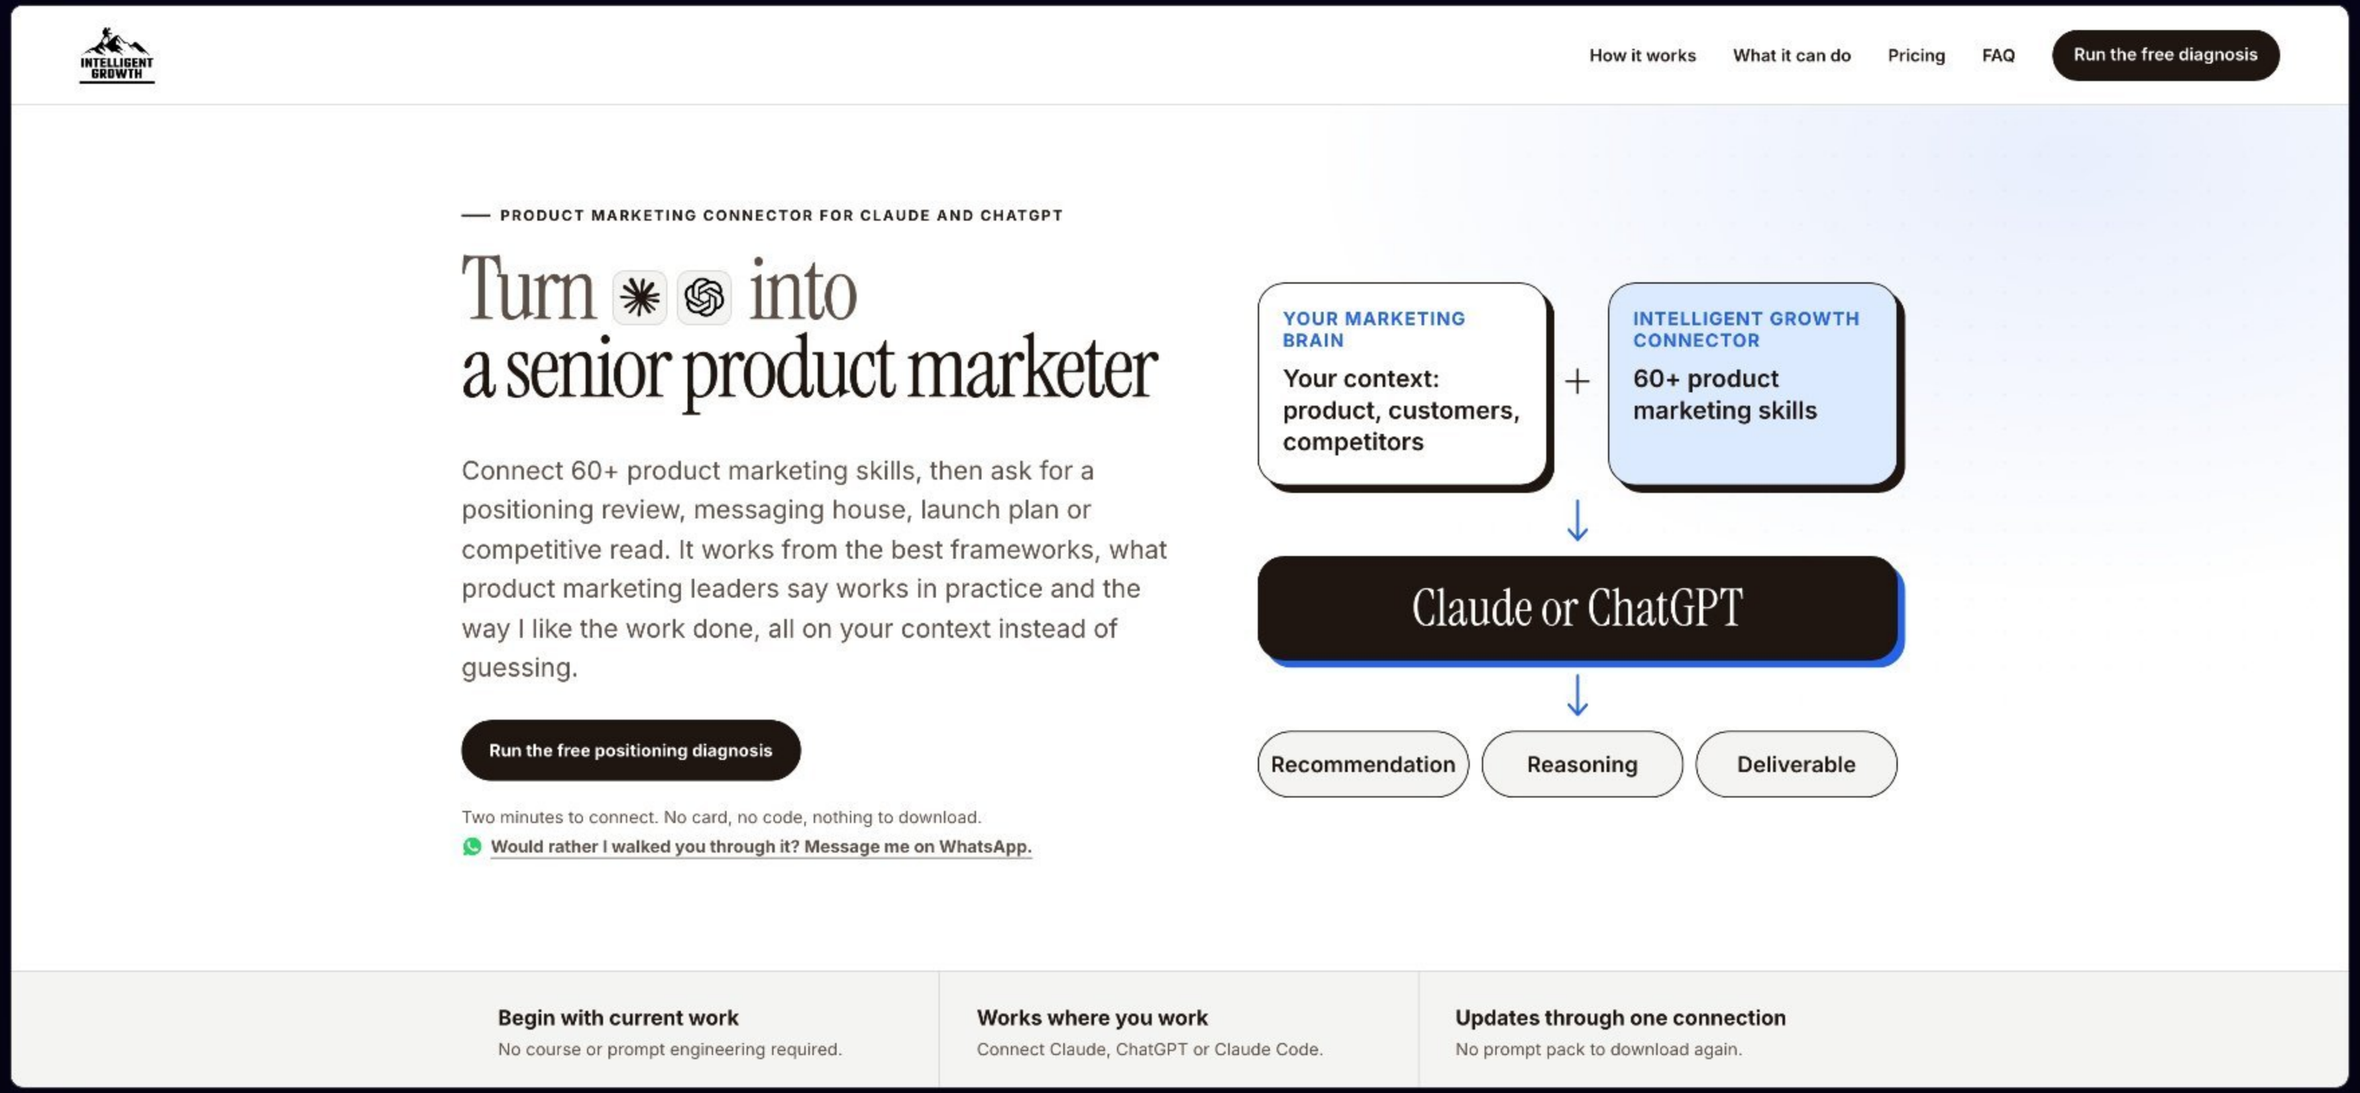

WIRED TO YOUR BRAIN

Write a LinkedIn post about our launch

"I lose every Monday to the same report,"

- Same model, same day. The only thing that changed is what it read before writing.
-

The Connector. intelligentgrowth.app/mcp

THE DEMO · ONE REAL RUN

Watch the system tear down a *category.*

On my own product, the Intelligent Growth Connector. Ads pulled 11 August 2026.

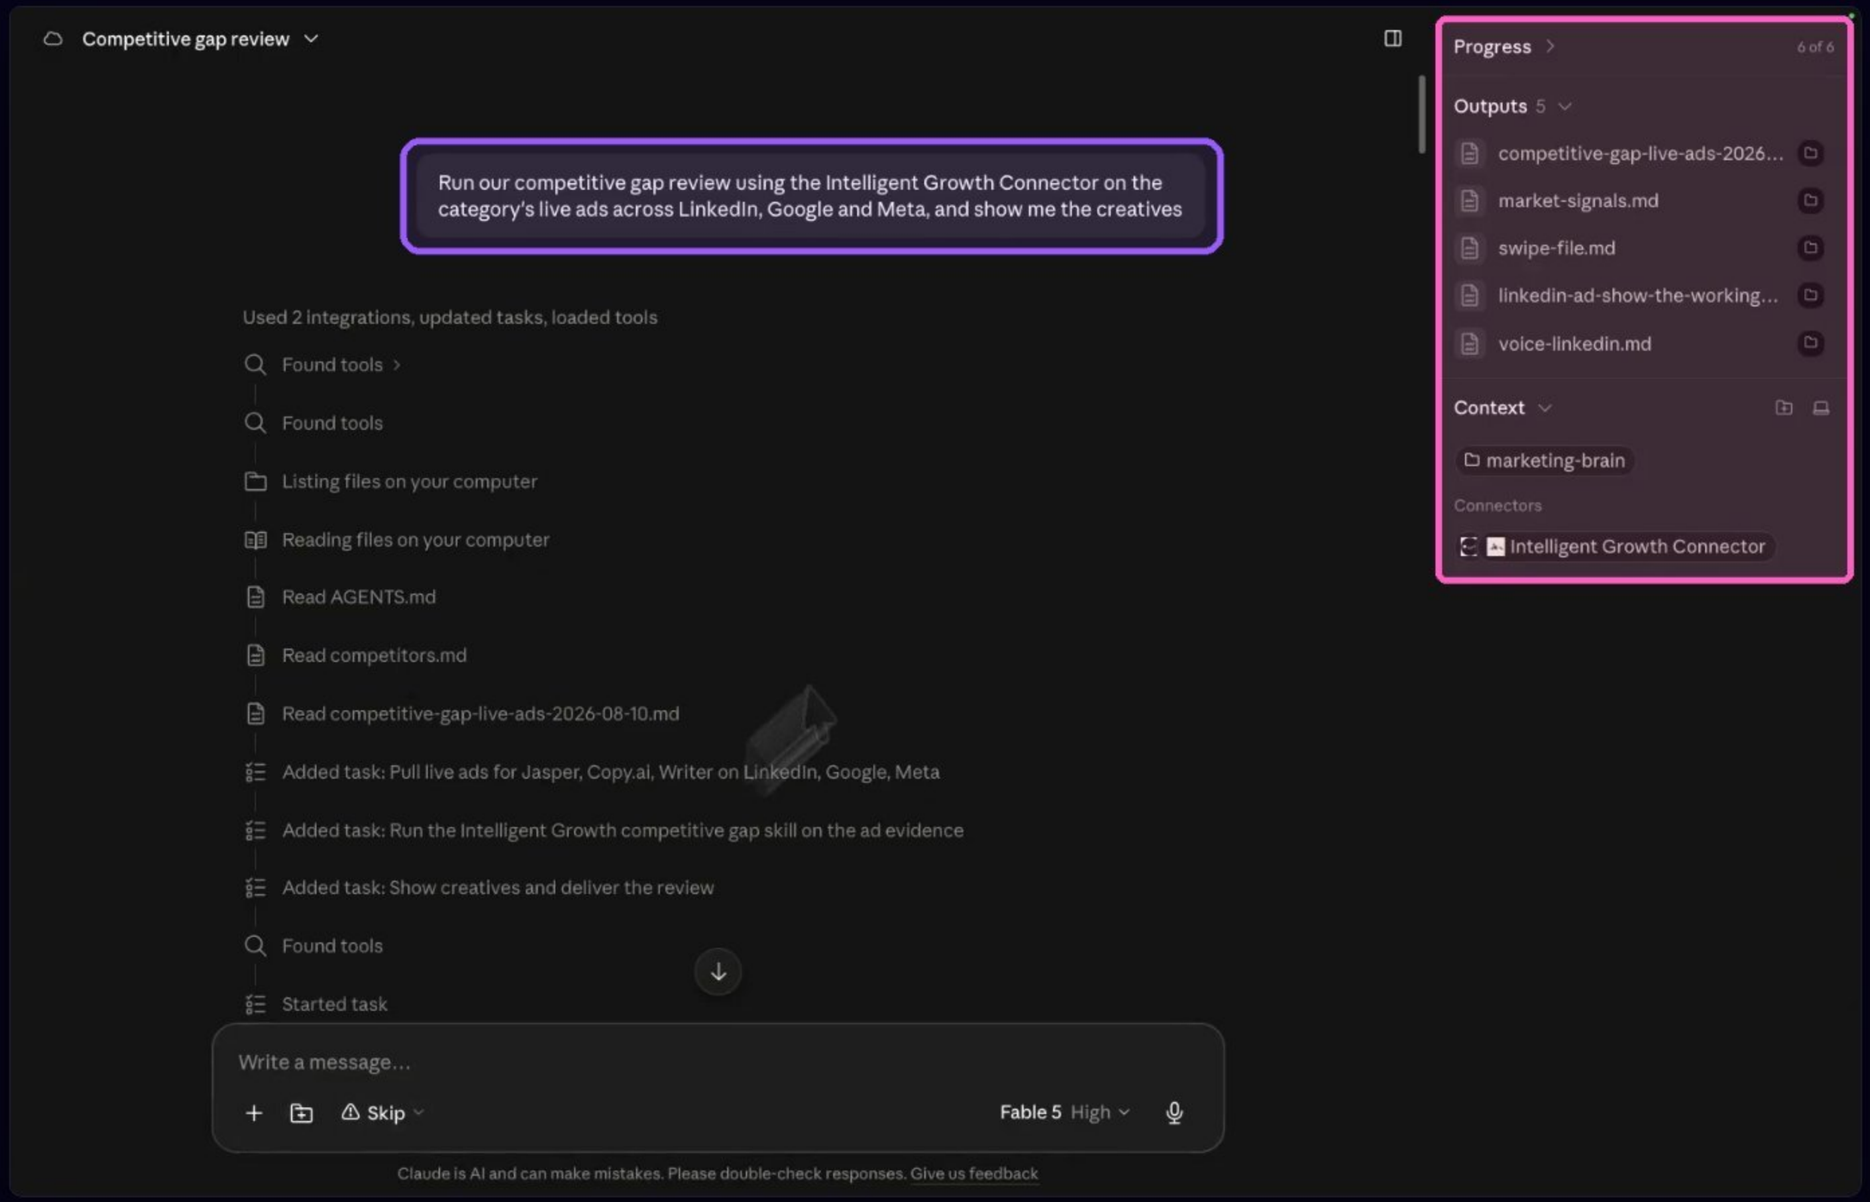

Brain: product context. Connector: teardown skill. Proxy: live ads.

- Pull the live ads
- Read what is working
- Find the white space
- Compare the platforms
- Find the positioning angle
- Draft one ad script
- Judge it honestly
- Show what made it work

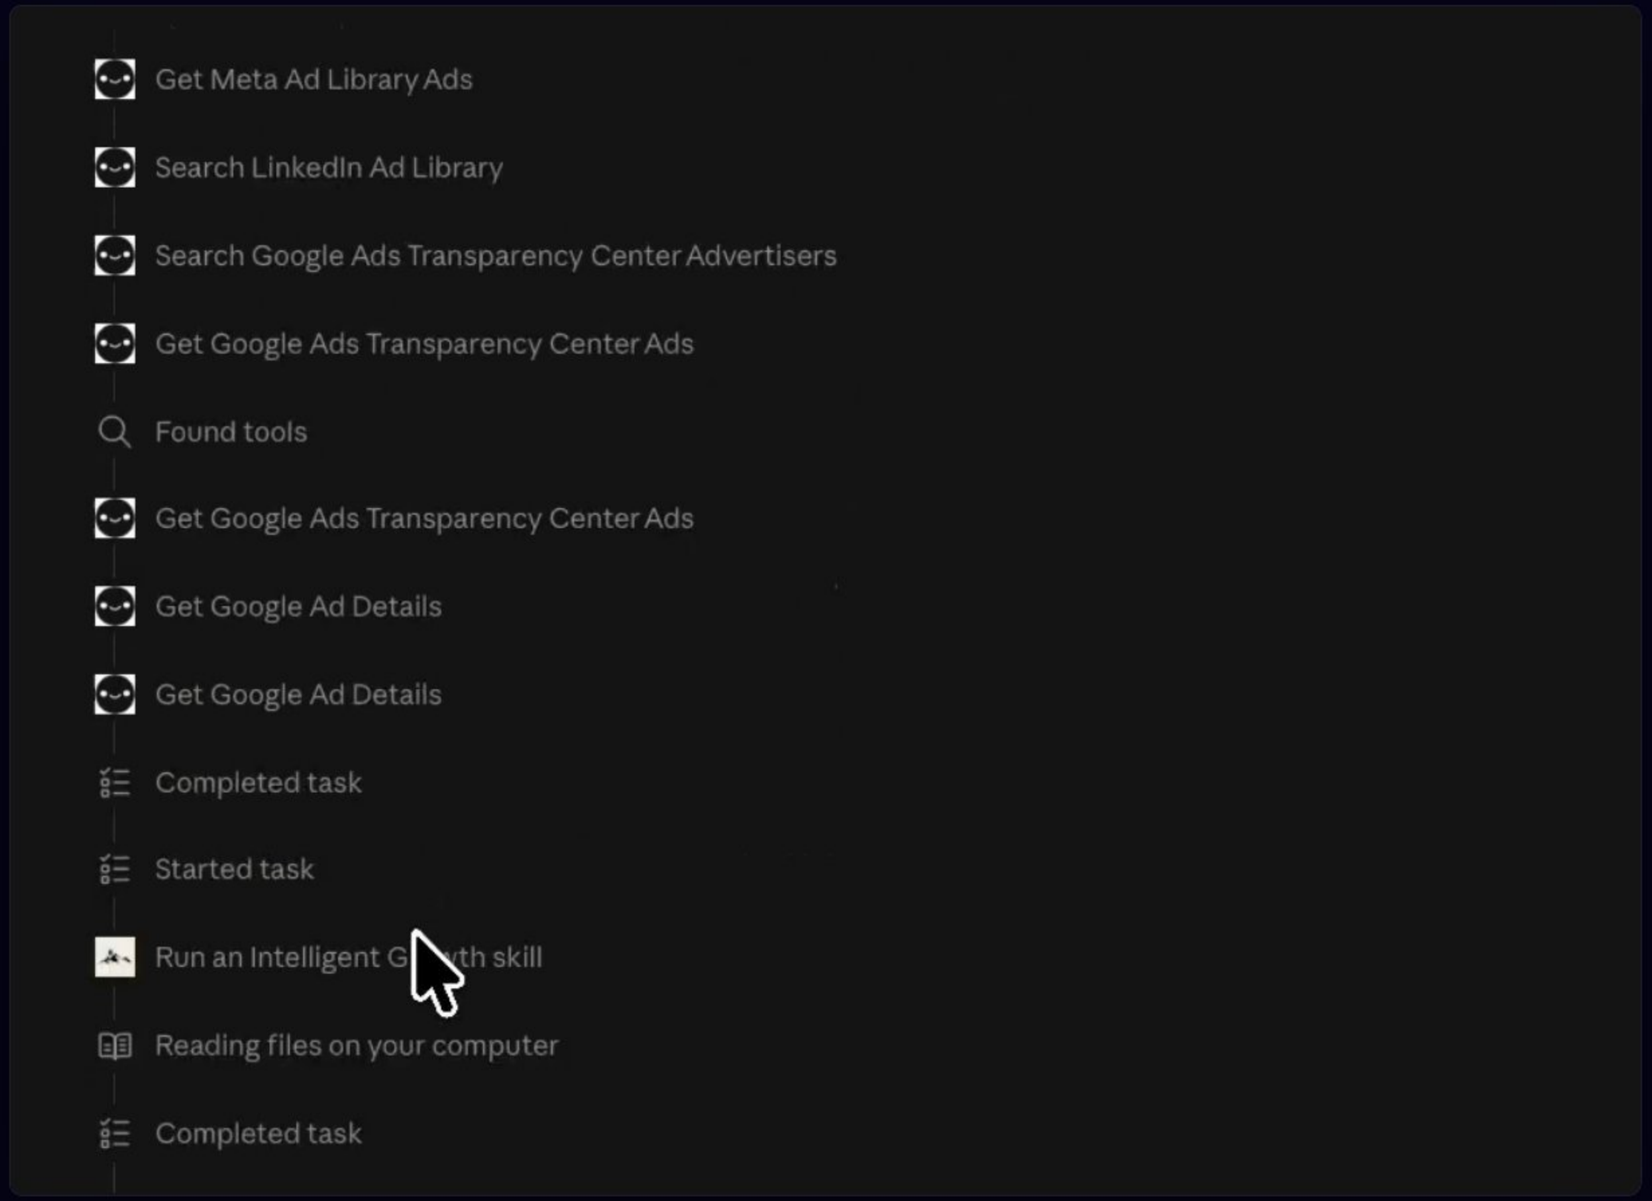

THE RUN, 10 SCREENS

A brain is just a folder of text files.

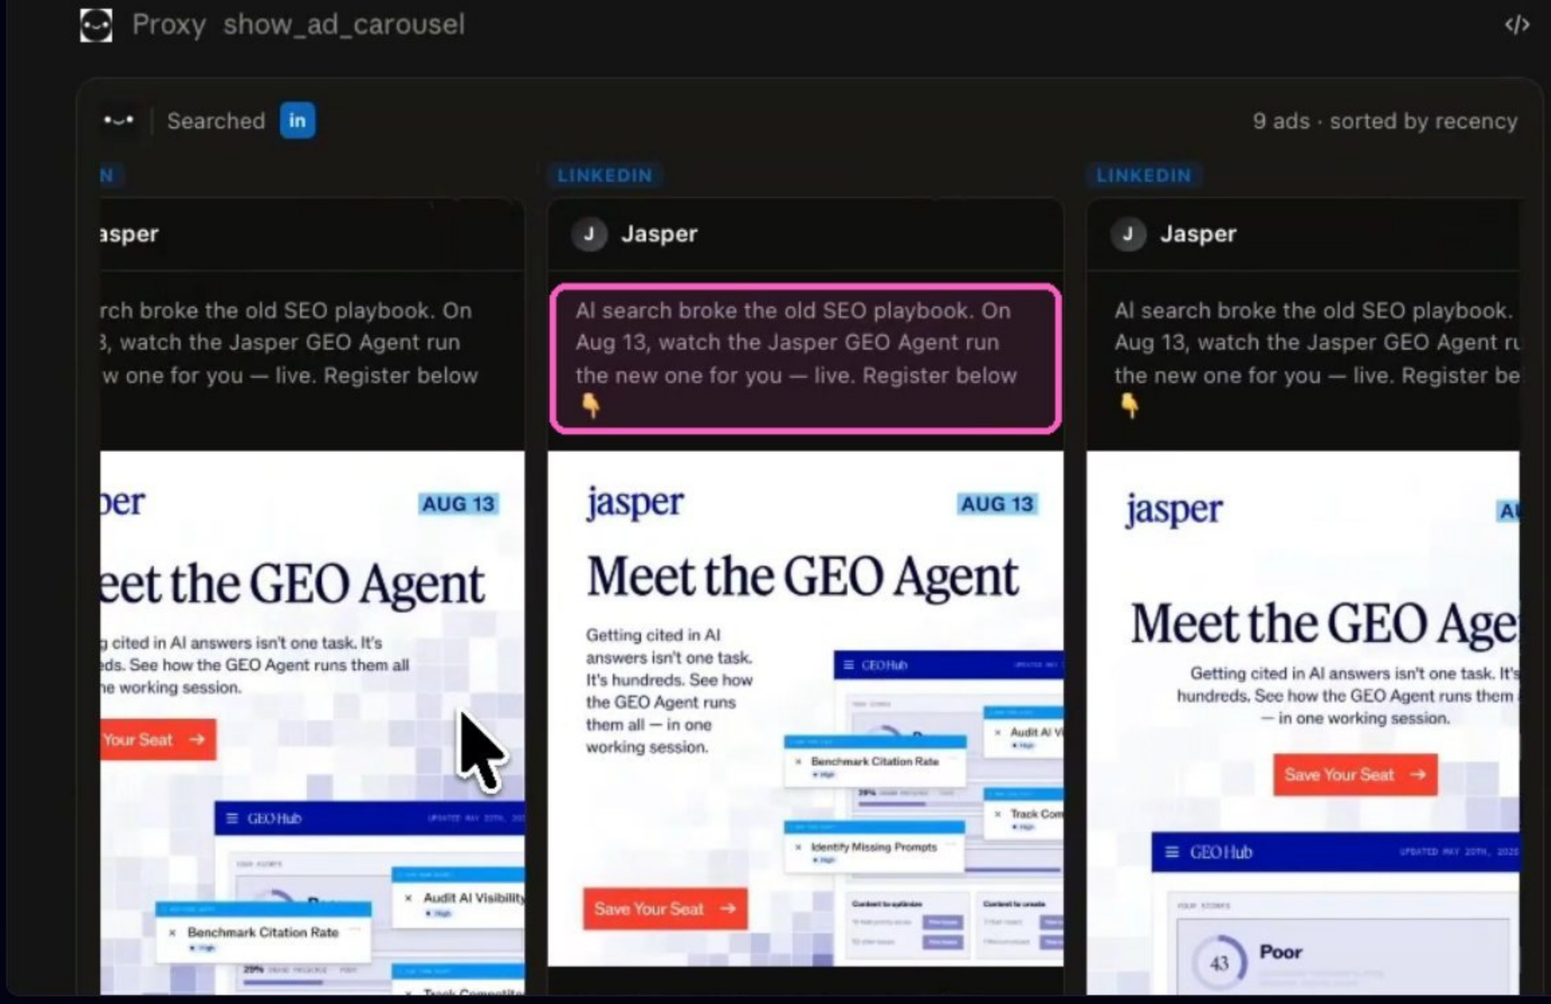

Demo 1 of 10. One ask, the Brain folder and the Connector attached

Demo 2 of 10. It reads the Brain, searches the three ad libraries, then loads the skill

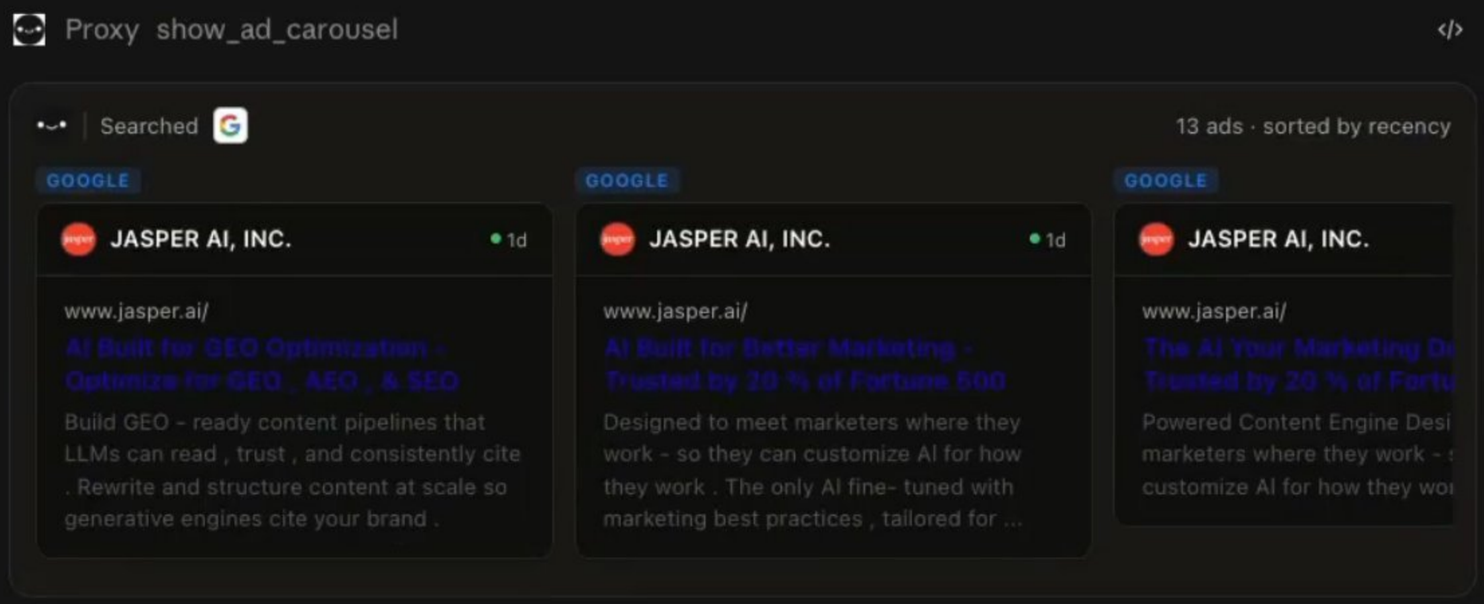

the Jasper GEO Agent run the new one for you", with one supporting angle on GEO being hundreds of continuous tasks. Two days out from the event, on the platform where they sell to teams, marketing craft is still absent.

Demo 3 of 10. Jasper on LinkedIn: an agent that does the work for you

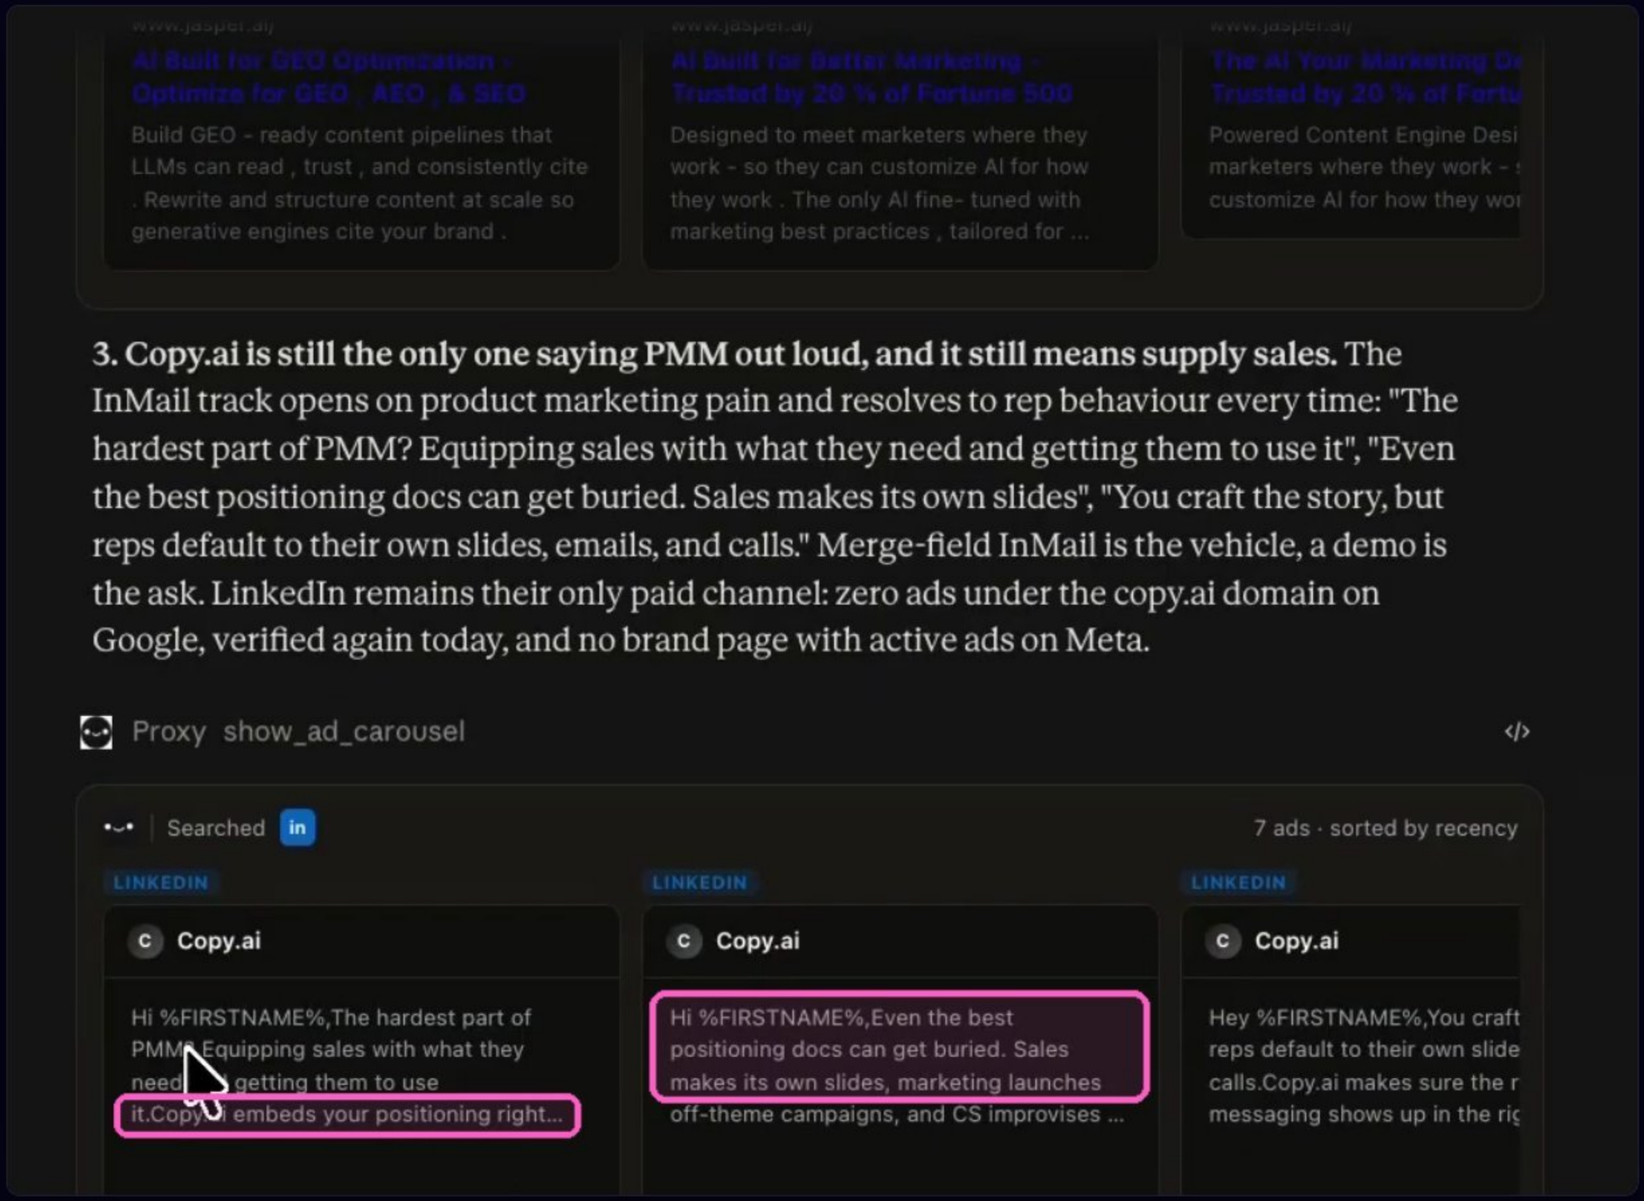

and approve its work" and "approve its output before it ships". That is Jasper borrowing review language for agent supervision. Different job to ours, approving an agent's GEO fixes rather than inspecting the thinking in strategy work, but it is a second brand moving onto review vocabulary. More in the watch item below.

2. On Google, Jasper still runs two layers, and the old one keeps earning its budget. The evergreen craft and throughput ads first shown July 2025 were still serving this morning, thirteen months of continuously renewed spend, which reads as an angle that earns its keep. Inference. The GEO, AEO and SEO intent layer added from late 2025 through March 2026 is also still live. Keywords they visibly buy: copywriting, social content, SEO, AEO, GEO, marketing AI. Still nothing on positioning or messaging.

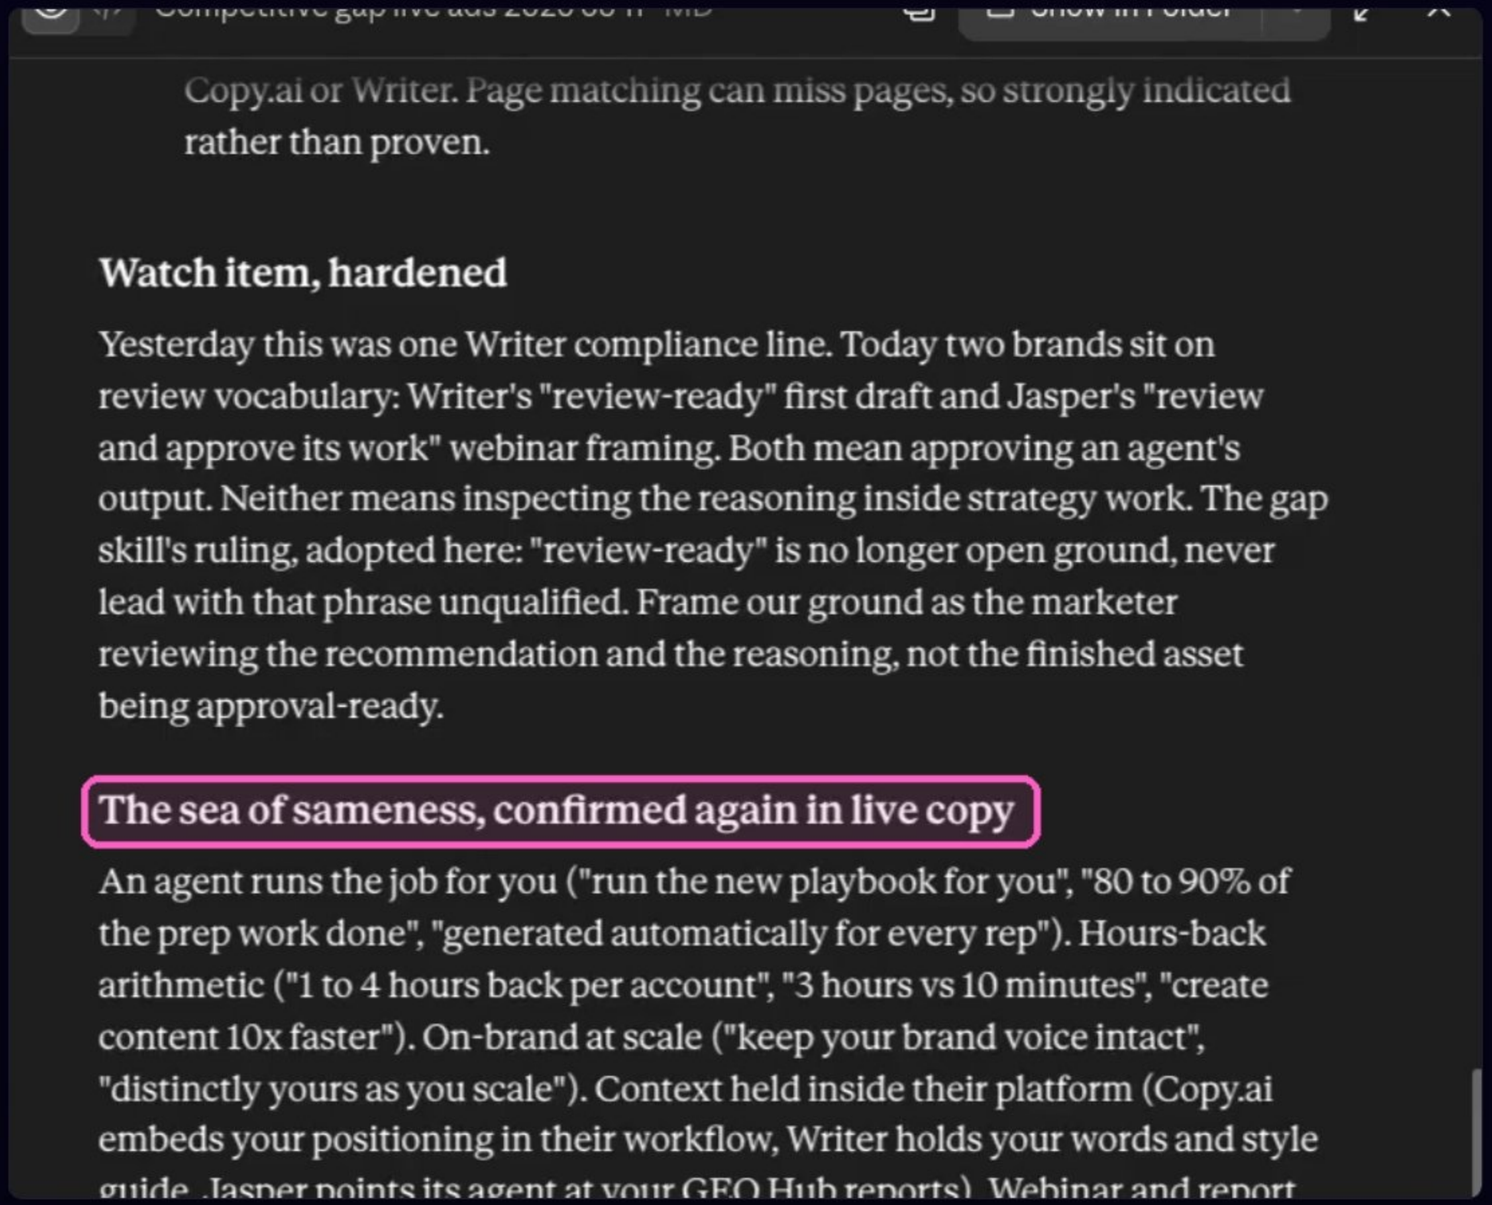

3. Copy.ai is still the only one saying PMM out loud, and it still means supply sales. The

Demo 4 of 10. Jasper on Google: the same brand, a different buyer

Demo 5 of 10. Copy.ai: the only one talking to product marketers

Copy.ai or Writer. Page matching can miss pages, so strongly indicated rather than proven.

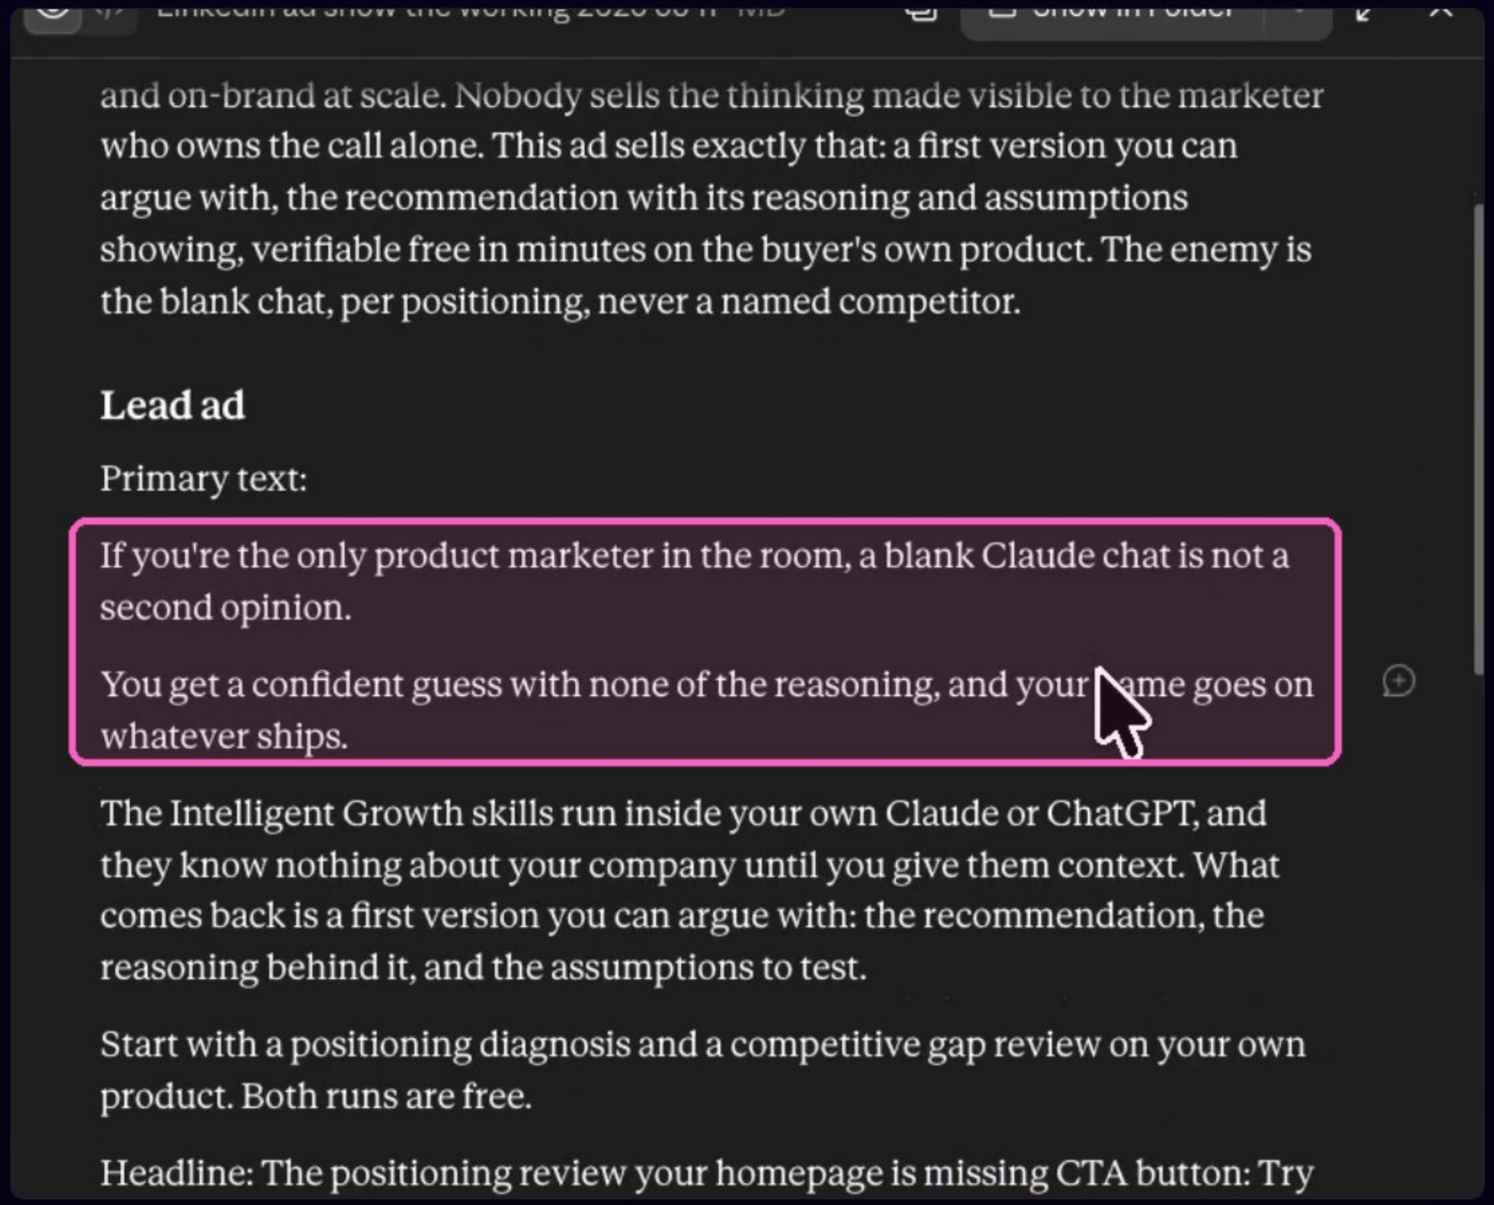

Watch item, hardened

Yesterday this was one Writer compliance line. Today two brands sit on review vocabulary: Writer's "review-ready" first draft and Jasper's "review and approve its work" webinar framing. Both mean approving an agent's output. Neither means inspecting the reasoning inside strategy work. The gap skill's ruling, adopted here: "review-ready" is no longer open ground, never lead with that phrase unqualified. Frame our ground as the marketer reviewing the recommendation and the reasoning, not the finished asset being approval-ready.

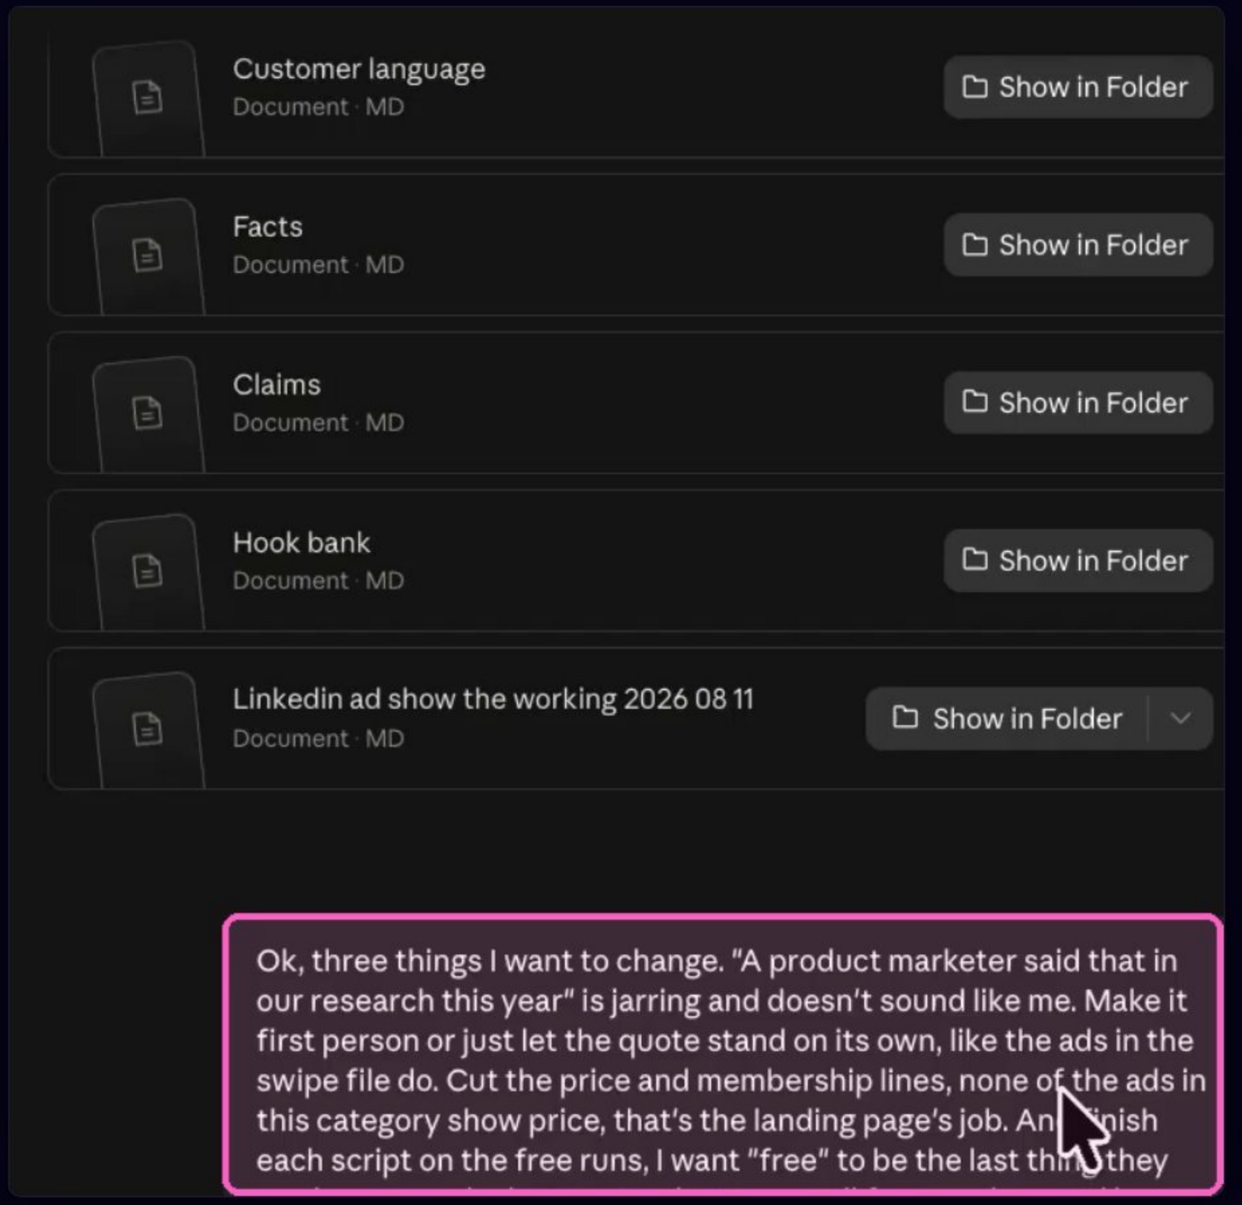

The sea of sameness, confirmed again in live copy

An agent runs the job for you ("run the new playbook for you", "80 to 90% of the prep work done", "generated automatically for every rep"). Hours-back arithmetic ("1 to 4 hours back per account", "3 hours vs 10 minutes", "create content 10x faster"). On-brand at scale ("keep your brand voice intact", "distinctly yours as you scale"). Context held inside their platform (Copy.ai embeds your positioning in their workflow, Writer holds your words and style guide, Jasper points its agent at your GEO Hub reports). Webinar and report

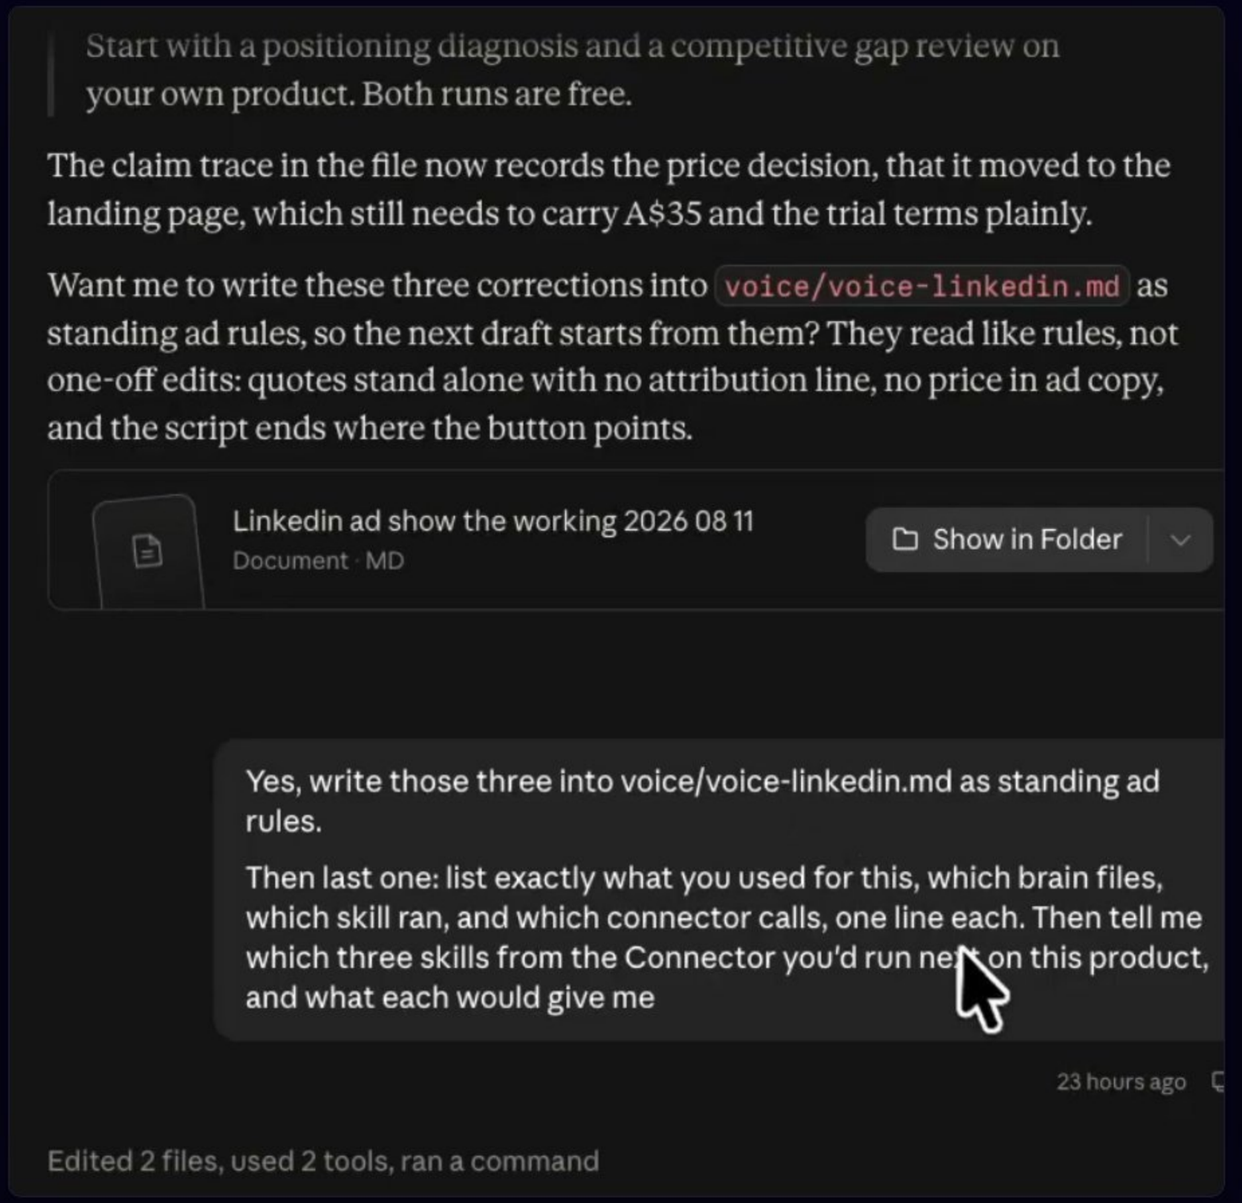

Demo 6 of 10. The saved review: the sea of sameness and the white space

Demo 7 of 10. The saved ad: the lead hook, every claim traced to a fact

Demo 8 of 10. The feedback: three things to change

Demo 9 of 10. The feedback becomes standing rules in the voice skill

voice/craft.md (sentence craft), voice/voice-linkedin.md (ad template, updated), customer/customer-language.md (verbatim quotes for hooks), company/claims.md (do-not-say list), facts.md (claim verification), company/offers.md (free runs and pricing), company/messaging.md (message house), company/positioning.md (white space and enemy), customer/hook-bank.md (hook shapes). Also written new: customer/swipe-file.md, and the two outputs files.

Intelligent Growth Connector calls: ig_apply running ig_competitive_gap in execute (turned the three-platform ad evidence into the gap review and the one move), linkedin_agency in execute (the Show the working concept and the five-part script, one failed call retried), de_slop in review (seven flags on the draft, all fixed before it shipped to you).

Ad library calls, via the Proxy connector: search_linkedin_ads three times (Jasper, Copy.ai, Writer), get_google_platform_id three times, get_google_ads three times (Jasper's advertiser ID, the copy.ai domain to verify zero, the writer.com domain), get_google_ad_details twice (22 creatives warmed), get_meta_platform_id once for all three brands, get_meta_ads once (zero active confirmed), show_ad_carousel five times to render the creatives.

The three Connector skills I'd run next on this product, each pickin[illegible] something this session surfaced:

pmm_homepage. The ad's whole claim is that the landing page shows the recommendation, reasoning and assumptions above the fold, and the claim

Demo 10 of 10. What this session used: Brain files, skills, connector calls

THE TASTE LESSON

The system gathers and drafts. What is true and worth saying stays with *you.*

FIX THE DRAFT

Helps you once.

You catch the line that overstates the claim, point it back to the evidence, and it gets rewritten. The next run starts in exactly the same place.

FIX THE SKILL

Helps every run after it.

When the same weak line keeps coming back, put the rule in the skill. Every run from then on starts above where this one did.

KEEPING IT CURRENT

Stop context rot before it *starts.*

1 · SMALL FILES

No single giant file.

A set of smaller files with an index on top that shows where everything lives.

2 · A ROUTINE FILES IT

New information goes to the right place.

Overnight it reads Slack, meetings and the market. Core facts update the core file, project notes go to that project with a dated log.

3 · YOU SEE THE DIFF

Every change runs past you.

Every file it touched and what changed. Check it all at first, then skim as it learns what you correct.

You're the editor. Claude does the data entry.

YOUR BRAIN, THEN THE TEAM'S

Start it as yours. Then open it up *one folder at a time.*

1 · GOOGLE DRIVE

Everyone reads the same files.

Put the folder in Google Drive and every teammate's AI tool reads the same brain.

2 · GIT REPO

Every change is tracked.

Product, sales and marketing point Claude at the same repo and see who changed what.

3 · TEAM CONNECTOR

Ask it from Claude or ChatGPT.

Every answer cites its source, and each person only sees the folders you give them.

Sales and product answer from the positioning you wrote, not their own version of the pitch.

HOW TO START

Five steps, and the first one is a *folder.*

1. Make one folder on your computer called **marketing-brain**.
2. Dictate three files: one about your company, one about your market, and one about how you work.
3. Feed it what you already have. The last positioning doc, a few call recordings, the launch brief that worked.
4. Point Claude, Codex or ChatGPT at the folder.
5. Keep feeding it. Every call, every useful bit of writing. That is the habit.

Scan it and enter your email. Everything from today goes straight to your inbox.

`intelligentgrowth.app/resources`

TAKE IT HOME

I packaged my product marketing skills into one *Connector.*

Your brain supplies the context and you own it. The Connector supplies the method, and it only knows what you choose to give it.

THE CONNECTOR

60+ product marketing skills, one connection.

Positioning, messaging, launches, competitive work, enablement, and more, inside Claude or ChatGPT. No code. It loads the right skill for the task and follows the same method I use.

FREE TO START

Two free runs, on your product.

A positioning diagnosis and a competitive gap review, free, on what you sell.

THEN THE REST

14 days free, all 60+.

1. Choose Claude or ChatGPT
2. Add the connector
3. Run the free skill on your product

Get the session resources

`intelligentgrowth.app/resources`

Give your AI tool *one place* for your customer context, company proof and working rules.

Scan the code and enter your email. I'll send you these slides, the starter folder, the setup prompt, and both connectors from the demo.

`intelligentgrowth.app/resources`

Slides and starter folder, free. 14-day free trial on the Connector.

Thank *you.*

Scan for these slides, the starter folder, the setup prompt and the Connector link.

Everything from today, in one email.

`intelligentgrowth.app/resources`
